Final Web App Peer Evaluation

Carbon Accounting Course Project SDG 2410J

Course Weight	15% of the final course grade
Scoring	40% from instructor and 60% from peers use the same criteria

Purpose

Use and evaluate the Final Web Apps of Personal Carbon Footprint Calculator produced by the other seven groups. Evaluate each calculator from a user's perspective. You do not need to act as Li Ming or independently verify every emission factor.

You may use your own approximate data or a realistic hypothetical student profile. Do not enter sensitive personal information.

Rating Guide

Excellent: 90-100% of available points; Strong: 75-89%; Developing: 60-74%; Limited: below 60%.

Evaluation Criteria

Criterion	Points	What Will Be Assessed
Usability and User Experience	25	The calculator is easy to understand and navigate. The user can enter, review and change information without unnecessary difficulty. Questions, labels, units and time periods are sufficiently clear, and the overall process is manageable.
Product Value and Response to User Needs	20	The intended use is clear. The calculator provides meaningful value by helping the user understand, interpret or act on personal carbon-emissions information. It offers more than simply displaying a final total.
Functionality and Stability	15	The main calculation process can be completed. Inputs, controls and recalculation work as expected, and no major error prevents the user from obtaining or reviewing results.
Results and Reduction Guidance	20	Results are understandable and useful. Explanations and reduction guidance are relevant to the results and appropriate for the intended user, allowing practical use of the information provided.
Carbon Accounting Credibility and Transparency	20	Units, time periods, important assumptions and main data sources are identifiable. Calculations and results appear internally consistent and reasonably plausible, and important limitations are communicated where needed.
Total	**100**	

Final Web App Score Sheet

Complete one form for each of the other seven groups

Group Evaluated: 1 2 3 4 5 6 7 9 ~~**Evaluator Group:** 1 2 3 4 5 6 7 8~~

Do not evaluate your own group's product. Submit the score through the corresponding Canvas evaluation entry.

Criterion	Maximum	Score
Usability and User Experience	25	
Product Value and Response to User Needs	20	
Functionality and Stability	15	
Results and Reduction Guidance	20	
Carbon Accounting Credibility and Transparency	20	
TOTAL	**100**	

Evidence from Your Use

One product strength you observed:

One issue or limitation you noticed:

Testing Confirmation

[ ] I completed the main calculation process.
[ ] I entered or changed activity values and checked the response.
[ ] I reviewed the results and reduction guidance.
[ ] I checked at least one unit, source or important assumption.
